The one truck  
accessory you don't  
want to live  
without...

# ONE PERSON IS ALL IT TAKES TO LOAD OR UNLOAD

**1**

The Take-My-Toyz® is powered by a separate 12V battery housed in a plastic case for weather resistance. An optional extended pigtail cable allows charging while the truck is operating.

**2**

Two 2500lb remote controlled winches are used to operate the Take-My-Toyz®. The patented design routes the cables through precisely placed pulleys with Oilite bearings for raising, lowering, loading, or unloading the sled.

**3**

The sturdy, yet surprisingly lightweight, tubular steel frame fits stationary between the wheel wells. The pivoting inner framework accommodates the portable rail system the sled rolls upon.

**4**

Designed from tubular steel and steel mesh, the sled smoothly rides on chromed steel rollers with Oilite bearings to maximize ease of movement as the sled is pulled up and down the rail system.

**5**

The sturdy, detachable, 4-piece tubular rail system includes pivotal legs and cross steel supports. The included lock pins easily secure it in place during use and while stored safely on the sled during transit.

## INSTALL

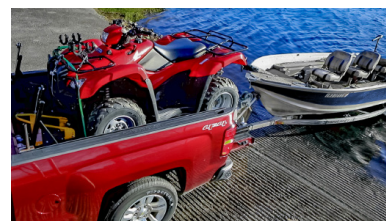

**NO DRILLING REQUIRED!** It slides in your truck bed and rests on a recommended rubber mat. The tailgate stays on too.

## LOAD

Load toys safely and easily in minutes using two remote fobs after securing your toy to the sled. Then simply store the 4-piece detachable rail system during transit.

## DRIVE

No problem using a trailer! It allows you to have more toys on every trip.
